2+ Yrs Production 6 SaaS Products 3 Payment Platforms 1 Solo Full Product Built

PROFESSIONAL SUMMARY

Lahore-based **Full-Stack Software Engineer** specialising in **Ruby on Rails** and **React.js**, with **2+ years** of production experience across **6 SaaS products** in AI/PRM, fintech, ed-tech, and college athletics. Sole engineer on a complete PRM platform — architected multi-tenant subdomain routing, bi-directional CRM sync with HubSpot and Salesforce, a Paddle-to-Chargebee billing migration, and self-hosted Moodle and Documenso infrastructure. Deep expertise in the Rails ecosystem (Devise, Pundit, Sidekiq, ActiveAdmin), Material UI (MUI), React Query, Redux Toolkit, PostgreSQL performance tuning, and QuickBooks Online integration. Available immediately for on-site or hybrid roles in Lahore.

TECHNICAL SKILLS

Backend:	Ruby on Rails 5/6/7, REST API design, ActiveRecord, PostgreSQL, MySQL, Redis, Sidekiq, ActiveJob, OAuth 2.0, service objects, multi-tenant architecture
Rails Gems:	Devise, Pundit (RBAC), Kaminari, ActiveAdmin, ActiveStorage, bcrypt, jsonapi-serializer, FactoryBot, RSpec
Frontend:	React.js, JavaScript ES6+, Material UI (MUI), TailwindCSS, React Query, Redux Toolkit, React Router v6, Vite, responsive/mobile-first design
Payments:	Stripe, Paddle, Chargebee — subscriptions, billing cycles, webhook verification, failure recovery, payment platform migration
CRM & Integrations:	HubSpot CRM (bi-directional), Salesforce (bi-directional), QuickBooks Online (QBO), Moodle LMS (SSO/iframe), Documenso (e-signatures)
Self-Hosted Ops:	Documenso and Moodle deployed from source in production — server config, SSO integration, iframe embedding, API wiring
Testing & Quality:	RSpec, FactoryBot, Jest, N+1 query optimisation, zero-downtime migrations, code review, regression testing
Open Source:	3 published Ruby gems on RubyGems.org — rails-persona, rails-tenantify, rails-css_unused — 1,583 total downloads (rubygems.org/profiles/devsyedghani)
Tools:	Git, GitHub, Linux, Heroku, Docker (working knowledge), Python, Agile/Scrum, sprint planning

PROFESSIONAL EXPERIENCE

Software Engineer · Blackstack Software Solutions Aug 2024 – May 2026
Lahore-based product studio · Full-stack ownership across 5 client SaaS products · Agile/Scrum

CinnaLab PRM ↗ AI-Powered Partner Relationship Management · Sole Engineer

- **Frontend architecture:** Built the complete React.js + Material UI (MUI) frontend from scratch — partner onboarding wizard, deal registration, lead scoring dashboards, performance analytics, and e-learning/certification module. Engineered dynamic subdomain routing with per-company MUI theme overrides and smart URL redirection, supporting isolated branded portals from a single codebase.
- **Backend & workers:** Architected the full Rails backend and Sidekiq async worker suite — webhook processing, CRM sync jobs, email delivery, and certification state machine transitions. Zero critical production incidents post-launch.
- **CRM ecosystem sync:** Built bi-directional data integrations with HubSpot and Salesforce — custom API clients, sync conflict resolvers, and idempotent Sidekiq jobs with retry logic and dead-letter handling.

- **Billing migration:** Integrated Paddle for initial payment operations, then successfully migrated the full billing infrastructure to Chargebee — subscriptions, billing cycles, webhook verification, and failure recovery, with zero data loss.
- **Self-hosted infrastructure:** Deployed DocuSign (e-signatures) and Moodle LMS from source in production — server setup, SSO, secure iframe embedding inside the Rails app — eliminating third-party SaaS licensing costs entirely.
- **Auth & RBAC:** Implemented multi-role access control with Devise + Pundit across 3 distinct roles (partner, admin, manager). Zero auth bug reports in production.

Intercollegiate ↗ *College Athletics Job Board · 2,500+ Active Listings*

- **Faceted search engine:** Architected a multi-dimensional categorisation system with faceted filtering across sport, division, conference, school, salary, and job level. Added location-based geolocation filtering with radius search. Achieved approximately 40% query time reduction via targeted PostgreSQL index optimisation across 2,500+ live listings.
- **Profile & analytics features:** Built profile claiming and account verification flows, “Who’s viewed your profile” analytics, job view tracking, and related-job recommendation surfacing — increasing repeat-visit engagement measurably.
- **Alerts & tooling:** Implemented saved searches, configurable email alert preferences via Sidekiq background mailers, and ActiveAdmin recruiter tooling. Shipped every sprint deliverable on schedule.

Controllr / Monthend ↗ *Month-End Finance SaaS · GAAP + Construction*

- **Real-time financial ingestion:** Engineered a data processing engine centralising transactions from emails, mobile receipts, and construction platforms — automating GAAP-compliant job-costing workflows.
- **QuickBooks Online sync:** Built a resilient, multi-entity bi-directional synchronisation pipeline with QuickBooks Online (QBO), eliminating manual reconciliation lag across all client accounts.
- **Core UI modules:** Designed and built the Transaction Inbox, Projects, Accounts, Vendors, Settings, and User Profile interfaces using React.js with modern responsive design patterns and Google OAuth onboarding.

Bullseye Education ↗ *K-12 Instructional Coaching Platform*

- **Coaching & analytics:** Built customisable teacher walkthrough tools and real-time feedback capture, deployed mobile-responsively across multiple school districts. Delivered a real-time principal/district analytics dashboard giving leadership same-day visibility into coaching outcomes.

Docyt ↗ *AI Bookkeeping SaaS · Microservices*

- **Stripe payment microservice:** Designed and built Stripe subscription service from scratch — idempotent webhooks, failure recovery, PCI-aligned data handling — for hospitality and SMB product lines. Reduced billing support escalations.

Jun – Aug 2023

Web Development Intern · *Apex Space, Lahore*

- Developed full-stack features for client web applications; participated in code reviews, daily standups, bug fixes, and production deployment support.

SELECTED PROJECTS

rails-persona *Ruby Gem · Rails · DSL · ActiveRecord · RubyGems.org* [GitHub] [RubyGems]

Published open-source Ruby gem — a user activity tracking and behavioural analytics library for Rails. Define trackable actions on any model using a clean DSL, then query frequency, recency, inactivity, and full activity logs — all stored in the app’s own database. Released on RubyGems.org (v0.2.0, 829 downloads).

rails-tenantify *Ruby Gem · Rails 7+ · Multi-Tenancy · ActiveRecord · Sidekiq · RubyGems.org* [GitHub] [RubyGems]

Published open-source Ruby gem — row-level multi-tenancy for Rails 7+ applications. Provides model scoping, controller tenant resolution, ActiveJob and Sidekiq context propagation, bulk-write protection, and RSpec helpers — a maintained alternative to `acts_as_tenant`. Released on RubyGems.org (v0.1.2, 327 downloads).

rails-css_unused *Ruby Gem · Rails · CSS/SCSS · ViewComponent · Stimulus · RubyGems.org* [GitHub] [RubyGems]

Published open-source Ruby gem — scans stylesheets (CSS/SCSS/Sass) and all view templates (ERB, HAML, Slim), ViewComponents, Phlex components, and Stimulus JS controllers to report CSS class selectors defined but never referenced. Supports BEM naming, dynamic class detection, source-file attribution, CI exit codes, and configurable ignore lists — zero runtime overhead. Released on RubyGems.org (v0.2.1, 427 downloads).

Urdu Signify *Python · GANs · NLP · Deep Learning* Final Year Project, UET Lahore [Portfolio]

Converts Urdu text to Pakistan Sign Language (PSL) video animations using GANs and NLP preprocessing. Novel deep learning application addressing the communication gap for Pakistan’s deaf community; presented to faculty panel at UET Lahore.

Online Exam System *Ruby on Rails · React.js · Devise · Pundit · RBAC* [GitHub]

Multi-role exam platform (admin / teacher / student) with full state-machine exam lifecycle. Demonstrates real-world Rails gem usage, RBAC architecture, and clean API design.

WhatsApp Chat Analyzer *Python · pandas · Matplotlib* [GitHub]

End-to-end analytics pipeline from raw WhatsApp exports to interactive insights: frequency analysis, participant rankings, word clouds, and time-trend charts.

EDUCATION

B.Sc. Computer Science — University of Engineering & Technology (UET), Lahore 2020 – 2024
Data Structures & Algorithms · Database Systems · Software Engineering · Web Technologies · Operating Systems · Computer Networks
